UTA Human Subject Research (HSR) Phased Ramp-Up: Permitted Activities (Updated September 15, 2021)

Restarting of any in-person human subject research (HSR) study will be based on the ability to abide by current COVID-19 restrictions in place (described below) and the risk for exposure or transmission as it relates to the interaction, interventional activity, or procedure necessary to conduct the study.

INSTRUCTIONS:
1. Ensure your research activities are permitted as described in the table below. Pay special attention to the approval/notification requirements for the Phase of research you plan to initiate.
2. Consult the Checklist (pages 3 - 5) and ensure your lab and activities can meet all requirements as applicable.
3. Ensure that all students and research personnel are trained and familiar with special precautions and lab procedures.
4. Ensure all subjects sign and receive a copy of the informational handout, “Special COVID-19 Information for Research Participants” (pages 6 - 9).

<table>
<thead>
<tr>
<th>Risk Category</th>
<th>HSR Person-to-Person Study Activities Allowed</th>
<th>Status</th>
<th>Notifications and Approval</th>
<th>Additional HSR COVID-19 Requirements</th>
</tr>
</thead>
</table>
| Unrestricted – (No Risk) | • Studies conducted via phone, virtual, electronic, or online methods  
• Analysis of data collected prior to pause of an active study  
• Secondary use of data (retrospective)  
**Example Activities:** Online surveys, virtual interviews | Permitted / Unrestricted | IRB approval needed only if protocol requires modifications to conduct research under COVID-19 restrictions. | N/A                                 |
| Phase 1 – (Low Risk) | • In-person interaction, observation or interventional activities that do not involve close interaction or direct physical contact  
• May take place on UTA campus, or at an IRB-approved off-site/off-campus setting  
• Activities or procedures must be completed in a single brief visit (maximum of 2 hours total)  
• Subject population is limited to healthy adults age 18 - 65, and not at higher risk for severe illness from COVID-19  
**No procedures/activities involving direct physical contact with participant (including to instrument them for a test) is allowed at this level.** | Permitted as of June 15, 2020 | **As of June 10, 2021, special safety precautions/procedures for Phase 1 are optional and no longer required.**  
**IRB**  
If you intend to continue utilizing face coverings, this procedure must be approved by the IRB in your protocol (existing studies must submit a modification to add it to the protocol). | **The safety precautions listed below are encouraged, but not required:**  
• Social distancing  
• Face coverings (EH&S Request Form)  
• Hand hygiene and respiratory etiquette  
• Research team and participant screening including temperature checks (see Checklist)  
• Increased disinfecting procedures  
• Contact tracing (see Checklist)  
• Use of handout “Special COVID-19 Information for Research Participants”  
• Contingency plans |
| Phase 2 – (Moderate Risk) | • In-person interaction, interventional activities and procedures that may involve close interaction or direct physical contact but can be performed while wearing face coverings, eye protection, and gloves  
**Example Activities/Procedures:** Blood or urine collection, blood pressure measuring, imaging, touching subject to apply instruments or take measurements | Permitted as of October 7, 2020 | **IRB**  
Initiation of new projects under Phase 2 requires submission of a protocol for IRB approval. For existing protocols, a modification submission is required. Pls must submit the “Request to Conduct HSR During COVID-19” form as an attachment to their new IRB protocol submission or protocol modification request.  
**Off-Site Locations**  
For off-site/off-campus settings, approval of the site/location is required. Include | **Activities on UTA Campus:**  
• Social distancing to the extent possible  
• Face coverings (EH&S Request Form), eye protection, and gloves  
• Hand hygiene and respiratory etiquette  
• Research team and participant screening including temperature checks (see Checklist)  
• Increased disinfecting procedures  
• Contact tracing (see Checklist)  
• Use of handout “Special COVID-19 Information for Research Participants”  
• Contingency plans  
**Off-Site Activities:** |
| Phase 3 – (High Risk) | In-person interaction, interventional activities and procedures that may involve close interaction or direct physical contact but because of the nature of the procedures, they cannot be performed while wearing face coverings, eye protection, or gloves. | Permitted as of June 10, 2021 | IRB Initiation of new projects under Phase 3 requires submission of a protocol for IRB approval. For existing protocols, a modification submission is required. PIs must submit the “Request to Conduct HSR During COVID-19” form as an attachment to their new IRB protocol submission or protocol modification request. Off-Site Locations: For off-site/off-campus settings, approval of the site/location is required. Include confirmation of site’s approval in IRB protocol or modification request. | Activities on UTA Campus:  
- Social distancing1 to the extent possible  
- Face coverings4 (EH&S Request Form), eye protection, and gloves to the extent possible and as appropriate for the procedures  
- Hand hygiene and respiratory etiquette  
- Research team and participant screening including temperature checks (see Checklist)  
- Increased disinfecting procedures3  
- Contact tracing (see Checklist)  
- Use of handout “Special COVID-19 Information for Research Participants”  
- Contingency plans  
Off-Site Activities: Off-site activities must apply the standards above when possible, plus comply with state and institutional policies and requirements of the local site. |

---

| 1Social distancing, as defined by the [CDC](https://www.cdc.gov), must also correspond to any applicable institutional, state, or local restrictions in place.  
2Further information regarding people at higher risk for severe illness from COVID-19 can be found in detail on the [CDC](https://www.cdc.gov) website.  
5Non-sensitive timeline refers to projects that require participants return on a specific date or lose applicability of previously acquired data.
Checklist for HSR Planning During COVID-19

All researchers planning to initiate Phase 2 or 3 research activities with human subjects must plan for and address each item in this Checklist. This Checklist is intended to implement minimum precautions for mitigating exposure and transmission while conducting research. There may be additional requirements at the college or department level, or building-specific requirements. Researchers should also consider whether any of the additional procedures listed below could significantly impact the subject’s safety or comfort level in the particular study, or impact the study’s research results (for example, by introducing unwanted variables).

☐ PLANNING AND RESPONSIBILITIES
Follow any active UTA Guidelines for reporting of symptoms, COVID-19 exposure, or illness. To further reduce the risk to participants, a more thorough procedure must be developed and communicated to all research team members. Procedures should include:

- What must be reported and to whom
- Plans for handling temporary pause/closure of HSR study and lab space impacted by exposure
- How long impacted person(s) must self-quarantine or be symptom free before being permitted to conduct HSR activities
- Team member designated to send notification to the UTA IRB to report potential exposure to research participant
- Process to follow if a participant contacts any team member and reports symptoms or exposure within 14 days of research activity
- Plans for spacing/scheduling subject visits to allow enough time for appropriate cleaning and disinfection between subject visits and participant screening (limit the visit to the minimum amount of time needed and consider splitting long visits into multiple, shorter visits)
- Plans for acquiring appropriate amount of PPE for team members and participants
- Plans for lab access and limiting room occupancy (see “Lab Space Best Practices”)

☐ RESEARCH TEAM MEMBER SCREENING
Establish process to perform daily health screenings for research team members, including symptom checks and taking temperatures before arriving to campus. Team members should take their own temperature immediately prior to coming to campus and document (either individually or within the lab) that their temperature is less than 100.0°F.

☐ PARTICIPANT SCREENING AND NOTIFICATIONS
The following screening information (questions listed below) must be collected from any new or returning participants via phone, email, or other virtual method within 24 hours of the participant’s planned study-related visit or interaction and immediately before the in-person interaction. If possible, it is strongly recommended to additionally screen participants 5 days prior to the visit. Researchers must request authorization from the COVID-19 HSR Task Force to alter the content of the screening questions below.

1. Confirm that the participant is not a person at higher risk for severe illness from COVID-19. Refer to the CDC website for a complete list.

2. Questions relating to COVID-19 exposure, symptoms, and travel.
   - Have you been diagnosed with COVID-19?
     - If yes, when were you diagnosed?
- Have you had a negative test? When?
- Have you been tested for COVID-19 antibodies? When?

- Have you experienced any of these symptoms (even if they were mild) in the past 14 days?
  - Cough
  - Congestion or runny nose
  - Shortness of breath or difficulty breathing
  - Fever
  - Chills
  - Muscle pain
  - Sore throat
  - New loss of taste or smell
  - Headache
  - Diarrhea
  - Feeling feverish or a measured temperature greater than or equal to 100.0°F

- Have you been in close contact with any person experiencing symptoms or with a confirmed case of COVID-19?
- Have you traveled the last two weeks? If so, to what locations? (Refer to UTA’s Travel Guidance for restrictions.)

Participants that report any symptoms of COVID-19 or possible exposure within the last 14 days are not permitted to participate in HSR research at this time, and should be referred to their primary care physician. After an additional 14 days, participants that have failed the screening process may be reconsidered for enrollment if they are re-screened.

In addition to the screening questions above, the following notifications/discussion should take place with participants prior to their visit:

1. Review the information from the “Special COVID-19 Information for Research Participants” handout with the participant.
2. Inform the participant that guests are discouraged, but a maximum of one adult guest may accompany them to the visit if necessary.
3. Inform the participant that their (and guest’s) temperature will be taken when they arrive for the study visit using a contactless thermometer.
4. Instruct the participant (and guest) to bring and wear their own face covering (refer to UTA’s Face Covering Guidance). If they do not have their own, one must be provided to them upon their arrival to campus. Masks can be obtained through EH&S: EH&S Request Form.

When the participant arrives for the study visit:

1. Confirm the subject (and guest) are wearing face coverings or provide one to them. Provide subjects with necessary eye protection and gloves.
2. Take the participant’s (and guest’s) temperature using a contactless forehead thermometer. If possible, this should take place at or near the entrance of the building before proceeding inside. For guidance, refer to CDC’s FAQ under Reducing the Spread of COVID-19 in the Workplace: “Should we be screening employees for COVID-19 symptoms (such as temperature checks? What is the best way to do that?” Participants should be rescheduled if they or their guest have/has a temperature higher than 100.0°F. When temperatures are confirmed as acceptable, social distancing should continue to be maintained for the remainder of the visit to the extent possible.
3. Repeat the health screening questions above while maintaining social distancing.
4. Obtain participant’s signature on the COVID-19 informational handout and provide a copy.
5. Keep a log/documentation of participant’s name, guest’s name (if any), date of visit, participant/guest
temperature readings, and which member(s) of the research team were present during the visit.

☐ **SOCIAL DISTANCING PLANS**
Create social distancing plans according to [CDC guidelines](https://www.cdc.gov/coronavirus/2019-ncov/index.html) that can be maintained by research team members and participants throughout the in-person interaction or visit. For Phase 2 or 3 activities, consider how social distancing can be maximized and maintained outside of any required direct contact/close interaction. Be sure to think about shared laboratory spaces and limiting researchers in small spaces at one time in the plans.

☐ **FACE COVERINGS, GLOVES AND EYE PROTECTION**
Prior to restarting, procure all necessary face coverings, gloves, and eye protection for research team members and participants. Researchers are responsible for reviewing and complying with [UTA’s Face Covering Protocol](https://www.uta.edu/announcements/coronavirus) and CDC’s guidance for appropriate use and removal of face coverings, gloves, and eye protection. Researchers are responsible for providing instruction of proper use to participants.

☐ **DISINFECTING AND CLEANING**

☐ **CONTACT TRACING FOR COVID-19**
Develop a system to closely document laboratory activities to quickly identify any person impacted by a report of illness or exposure. Remember that any documentation accessible or visible to non-research team members must maintain confidentiality. At minimum, documentation should include participant’s name, guest’s name (if any), date of visit, participant/guest temperature readings, and which member(s) of the research team were present during the visit. Report any potential exposure or personal diagnosis of COVID-19 in accordance with [UTA’s procedures](https://www.uta.edu/announcements/coronavirus) (see “Report Close Contact” and “Report Personal Diagnosis” forms). Communication and notifications to individuals regarding potential exposure will be coordinated with the local public health agency. If a research participant is potentially exposed to COVID-19, the incident must also be reported to the IRB.

☐ **IMPLEMENT USE OF “SPECIAL COVID-19 INFORMATION FOR RESEARCH PARTICIPANTS”**
Provide this special Information Sheet to all human subjects participating in face-to-face interactions or activities. Obtain subject’s signature on the form and provide them with a copy.

☐ **CONTINGENCY PLANS**
Given the uncertainty and evolving nature of the COVID-19 pandemic, it remains important for every research team to have a plan in place for additional closures, increased restrictions, or illness of essential team members/PI.

HANDOUT AND INSTRUCTIONS:
SPECIAL COVID-19 INFORMATION FOR RESEARCH PARTICIPANTS
INSTITUTIONAL REVIEW BOARD (IRB) STATEMENT:
Special COVID-19 Information for Research Participants

Until further notice, in-person human subject research activities including close or direct physical contact must administer the “Special COVID-19 Information for Research Participants” Information Sheet in addition to the protocol’s approved informed consent process/document. Researchers must provide each participant being seen with the Information Sheet as follows:

1. Research teams must contact each participant before their scheduled research visit to provide the information about COVID-19 risks. The information can be emailed or presented verbally to subjects by phone or other virtual method. The following points must be communicated to subjects in advance of their visit:
   a. The use of face coverings is requested for the safety of the subjects in relation to the specific protocol procedures, and/or to reduce variability in the data collected;
   b. The research activity is completely optional/voluntary. Therefore, if they are unwilling or unable to wear a face covering they can decline or defer participation to a later date when face coverings may no longer be necessary for the study’s procedures.

2. When participants arrive for a research-related visit, the study team must acquire the subject’s signature on this form, and provide them with a copy.

Any changes or additions proposed to the content of the Information Sheet must first be authorized by the IRB.
INFORMATION SHEET:
Important Information about COVID-19 and Research Participation

At the University of Texas at Arlington, our primary responsibility related to research is to protect the safety of our research participants.

COVID-19 refers to the Coronavirus that is being spread from person to person across our communities. We are providing you with important information about COVID-19 and the ways your study participation might change because of COVID-19 related risk.

If you are considering joining a study at this time or are currently enrolled in a study, it is important that you consider the following information to determine if study participation is right for you at this time.

How is COVID-19 spread? COVID-19 is a respiratory virus spread by respiratory droplets, mainly from person-to-person. This can happen between people who are in close contact with one another (less than 6 feet). It is also possible that a person can get COVID-19 by touching a surface or object (such as a doorknob or counter surface) that has the virus on it, then touching their mouth, nose or eyes.

Can COVID-19 be prevented? Current ways to minimize the risk of exposure to COVID-19 include the use of face coverings or “social distancing” which is a practice to decrease the potential for direct exposure to others who may have been exposed to COVID-19. It is important to understand that since study participation may include increased travel outside of your home and increased exposure to others within a clinical care environment or research site, it may increase your exposure to COVID-19.

What are the risks of COVID-19? For most people, the new coronavirus causes only mild or moderate symptoms, such as fever and cough. For some, especially older adults and people with existing health problems, it can cause more severe illness, including pneumonia. While we are still learning about this virus, the information we have right now suggests that about 3 of 100 people who are infected might die from the virus.

Who is most at risk? The Centers for Disease Control and Prevention (CDC) warns that older adults and people of any age who have serious underlying medical conditions might be at higher risk for severe illness from COVID-19. The following settings or conditions specifically may place you at high-risk:

- Age 65 years and older
- Live in a nursing home or long-term care facility
- People of all ages with underlying medical conditions, particularly if not well controlled, including:
  - Chronic lung disease or moderate to severe asthma
  - Serious heart conditions
  - Immunocompromised
    - Many conditions can cause a person to be immunocompromised, including cancer treatment, smoking, bone marrow or organ transplantation, immune deficiencies, poorly controlled HIV or AIDS, and prolonged use of corticosteroids and other immune weakening medications
  - Severe obesity (body mass index [BMI] of 40 or higher)
- Diabetes
- People with chronic kidney disease undergoing dialysis
- People with liver disease

**How could your participation in this research change as a result of COVID-19?** There are several ways we try to minimize your risk. If possible, we limit the number of times you have to come to a clinical care or research site. We ask every research participant if they have the symptoms of COVID-19 or have been in close contact with anyone who has or had COVID-19. It may be a requirement to check your temperature or we may ask you to wear personal protective equipment (PPE) such as a mask, gloves or eye protection. During your research visits, we try to reduce the time you are exposed to other people as much as possible. There may be last minute changes to how research procedures are performed (such as a change from an in-person visit to a telephone call) or cancellations of research tests or procedures to ensure your safety. It is even possible that your research procedures will be put on hold or stopped because of COVID-19.

The information related to risks of COVID-19 changes every day. The University is actively monitoring these risks and deciding how these risks should change our research. If you have questions or concerns about COVID-19 and your participation in research, please talk to the research team.

Your participation in the research remains completely optional and voluntary, and you may decline or discontinue at any time without penalty. If there are certain safety precautions or procedures you are uncomfortable with, notify the research team. Accommodations may be possible, but it is also possible that we choose to delay your research participation until a later time when the precautions are no longer necessary, or withdraw you from the study. If you develop symptoms or test positive for COVID-19 within 14 days of this activity, please immediately notify the research team.
